Fiscal Year:	FY12
<b>USDA-ARS Agreement ID:</b>	59-0206-9-082
FY12 USDA-ARS Award	\$ 5,848
Amount:	φ <i>J</i> ,040

**USWBSI Individual Project(s)** 

USWBSI Research		
Category*	Project Title	<b>ARS Award Amount</b>
VDHR-SWW	Developing Double Haploids to Expedite Mapping and Enhance FHB Resistance in SRWW.	\$ 5,848
	Total ARS Award Amount	\$ 5,848

- Camo	7/16/13
Principal Investigator	Date

\* MGMT – FHB Management

FSTU – Food Safety, Toxicology, & Utilization of Mycotoxin-contaminated Grain

GDER - Gene Discovery & Engineering Resistance

PBG – Pathogen Biology & Genetics

BAR-CP – Barley Coordinated Project

DUR-CP - Durum Coordinated Project

HWW-CP - Hard Winter Wheat Coordinated Project

VDHR - Variety Development & Uniform Nurseries - Sub categories are below:

SPR – Spring Wheat Region

NWW - Northern Soft Winter Wheat Region

SWW - Southern Soft Red Winter Wheat Region

FY12 (approx. May 12 – May 13)

PI: Mason, Esten

USDA-ARS Agreement #: 59-0206-9-082

**Project 1:** Developing Double Haploids to Expedite Mapping and Enhance FHB Resistance in SRWW.

1. What major problem or issue is being resolved relevant to Fusarium head blight (scab) and how are you resolving it?

Developing wheat varieties that combine resistance to FHB with the yield potential of currently grown varieties remains a bottleneck for plant breeders. Through the work of the USWBSI, breeding lines are now available which are adapted, have competitive yield and contain known genes for resistance to FHB. Utilizing double haploids for wheat inbred line production can reduce the breeding process by 5-7 years compared to traditional inbreeding. With respect to the USWBSI, utilizing double haploids allows for combining multiple resistance genes together in an adapted background in the shortest amount of time possible, resulting in the highest probability for developing FHB resistant varieties.

2. List the most important accomplishment and its impact (i.e. how is it being used) to minimize the threat of Fusarium head blight or to reduce mycotoxins. Complete both sections (repeat sections for each major accomplishment):

## **Accomplishment:**

F<sub>1</sub> seed from the cross AR01040-4-1/NC08-21273 was sent to Heartland Plant Innovations (Manhattan, KS) for double haploid production. NC08-21273 contains the *FHB\_5A\_Ernie* gene for FHB resistance. AR01040-4-1 is moderately resistant to FHB (unknown source), has excellent yield potential in Arkansas and the surrounding states and contains important genes for rust resistance (*Sr24/Lr24* and *Yr17/Lr37/Sr38*) which are important for a variety to be competitive in the region. Both lines are homozygous for *Rht\_B1*.

## **Impact:**

Double haploid lines developed from this cross and other crosses within the USWBSI will be cooperatively phenotyped throughout the region in order to identify those lines having a combination of FHB resistance and high yield potential that can be released as varieties.

FY12 (approx. May 12 – May 13)
